

Minnetonka Boulevard reconstruction

Preferred alternative

In winter of 2021-22, we introduced two potential roadway concepts for the project. We created an online input experience that allowed folks to learn more about the roadway concepts, rank how they felt about them, and provide location-specific comments. We also distributed paper copies of the ranking survey and flyers to local businesses and organizations, held an open house and attended a pop up. The preferred alternative (also called Concept A) emerged as a result of these engagement efforts, and below are the main things we heard.

Key features

- 3-lane roadway
- Multi-use trail on both sides
- Boulevards on both sides

Minnetonka Boulevard reconstruction

Concept A | Multi Use Trail on Both Sides

Between Ottawa Avenue and Natchez Avenue (Looking East)

Main comment themes

Support for additional green space

Support for the 4-3 lane conversion

Appreciate this design's more comfortable pedestrian and bicycle crossings

Desire for additional safety measures
