

Hennepin Healthcare System

Hennepin Healthcare System is the state's largest Medicaid provider system and safety-net trauma hospital in Minnesota, proudly serving the most complex populations from throughout the state. We combine research and innovation, teaching the future workforce, and investing in wellness with the unique populations we serve.

Our reality

Many of our patients experience barriers limiting their ability to be healthy. We primarily serve communities of color, adult and pediatric populations that are experiencing significant social and medical complexities, are low-income and have unstable housing, transportation, food insecurity and language barriers.

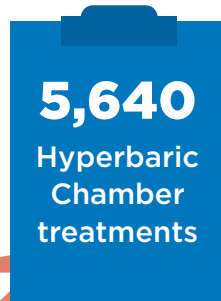

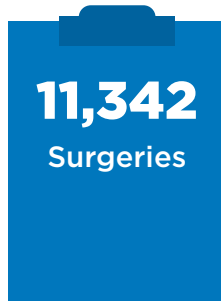

Hennepin Healthcare System Legislative Priorities in 2023

- Ensure hospital inpatient capacity is reserved for those who truly need this lifesaving level of care by investing resources to increase capacity and discharge patients to the right level of care.
- Establish a Recuperative Care Medicaid benefit to provide access to health care for people experiencing homelessness to reduce hospitalization and improve health outcomes.
- Establish ongoing funding for the Addiction Fellowship Program to train 15 specialized providers over five years.
- Protect access to graduate medical education by continuing the Medical Education and Research Costs (MERC) fund.
- Fund Project Echo, an evidence based, innovative education model benefiting providers and patients statewide.
- Maintain access to emergency medical services through the continuation of current Primary Services Areas, and the re-establishment of state support for the Medical Resource Control Center (MRCC), to support timely dispatch of emergency services.
